*Data are from the U.S. Bureau of the Census Current Population Reports, Series P-20, "Voting and Registration in the Election of November 1964" and subsequent reports for all years through 2020. These figures are from post-election responses to supplementary questions in the monthly Current Population Survey for a sample of households in November of each election year. Respondents to the survey report their own voting activity and that of other members of their household. The sample systematically over-reports both voting and registration by several million people. In years prior to 1996, the questions used to determine citizenship measures were asked in different ways, and the U.S. Bureau of the Census advises some caution in direct comparison across these years.
